Domains	Domains to fix	DMARC not enforced	DKIM not signing
2	**1**	**2**	**1**
1 receive mail	SPF, DMARC or DKIM missing or weak	Spoofed mail from these is still delivered	Mail sent from Microsoft 365 isn't signed for these

Domains 1 1 to review

SPF, DMARC and DKIM stop other people sending email as the client's domains. MTA-STS and TLS-RPT make other servers deliver mail to them encrypted, and report when they can't.

Flag	Domain	Receives mail via	SPF	DMARC	DKIM	MTA-STS	TLS-RPT	What to fix
Medium	fabrikam.example	Microsoft 365	Pass	Weak	Weak	Missing	Missing	DMARC is monitor-only (p=none); spoofed mail is still delivered; Microsoft 365 DKIM isn't set up (selector2 CNAME missing); No MTA-STS policy, so mail sent to this domain can be forced onto an unencrypted connection
