MICROSOFT 365 TENANT  
3 clients

How people sign in and how strong that is: methods by strength, admins without phishing-resistant MFA, the methods policy, and password age and expiry.

**Filtered view.** Strongest method: 4 of 12 rows, Client is Northwind Traders. The headline figures cover every row.

## Strongest method 4 2 to review

Each enabled member counted once, by the strongest method they have.

### By strength

| Flag     | Client            | Strength                   | People | Admins | Share of members | What it means                                                                      |
|----------|-------------------|----------------------------|--------|--------|------------------|------------------------------------------------------------------------------------|
|          | Northwind Traders | Phishing-resistant         | 6      | 0      | 17%              | Bound to the real Microsoft sign-in page, so a fake page can't relay it.           |
|          | Northwind Traders | Authenticator app or token | 14     | 1      | 39%              | Strong, but a convincing fake sign-in page can relay a code or push approval.      |
| ● Medium | Northwind Traders | Phone (SMS or voice call)  | 3      | 0      | 8%               | Weakest second factor: texts and calls can be intercepted or moved to another SIM. |
| ● Medium | Northwind Traders | None                       | 13     | 1      | 36%              | No second factor: the password alone gets in.                                      |
