What Microsoft Defender has flagged: open incidents and alerts, how severe, who is dealing with each, the accounts and devices they name, and what was resolved recently.

Open alerts 12 6 to review

Alerts nobody has resolved yet. One that's still new and assigned to nobody hasn't been looked at. Check what each names: for an account, its recent sign-ins, inbox rules and MFA methods; for a device, what Defender found on it. Then resolve it in Defender, saying whether it was a real threat.
