MICROSOFT 365 TENANT

northwindtraders.onmicrosoft.com

What other organisations' people can do here and whose MFA the tenant accepts (cross-tenant access), and the named locations Conditional Access trusts or blocks, with the policies using each.

Own settings

2

Organisations with settings of their own

Outside MFA trusted

Yes

By default, from every organisation

Trusted locations

2

IP ranges marked trusted

Locations not used

4

No policy includes or leaves them out

Default for other organisations 5 1 to review

What applies to every organisation without settings of its own. B2B collaboration is guest accounts; B2B direct connect is Teams shared channels without a guest account. Trusting another organisation's MFA or devices lets its people pass your Conditional Access with checks made at home.

Flag	Setting	Their people here (inbound)	Your people there (outbound)
	B2B collaboration	Allowed for all users, all apps	Allowed for all users, all apps
	B2B direct connect	Blocked	Blocked
● Medium	Trust their MFA	Yes	–
	Trust their compliant devices	No	–
	Trust their hybrid joined devices	No	–

Organisations with their own settings 2

Organisations given settings of their own, which replace the default for them. "Default" means that setting follows the default above. Microsoft gives each organisation's tenant ID, not its name: the Entra admin centre names them under External Identities > Cross-tenant access settings.

Tenant ID	Relationship	B2B collaboration in	B2B collaboration out	Direct connect in	Direct connect out	Trusts their MFA	Trusts their devices	Invitations redeemed automatically
11111111-1111-1111-1111-111111111111	Service provider	Default	Default	Default	Default	Yes	Compliant	Inbound
22222222-2222-2222-2222-222222222222	–	Default	Blocked	Allowed for 2 users or groups, Office 365	Default	Default	Default	No

Named locations 4 1 to review

Networks and countries Conditional Access policies can include or leave out. A trusted location counts as one of "all trusted locations", which policies often leave out of MFA, so a wide range marked trusted (wider than /16 for IPv4 or /32 for IPv6) or left out of a policy is flagged.

Flag	Location	Kind	Trusted	Ranges or countries	Used by	Last changed
	Head office	IP ranges	Yes	203.0.113.0/24	Not used	10 Feb 2026
● Medium	Old VPN	IP ranges	Yes	51.0.0.0/8, 2001:db8::/32	Not used	1 Jun 2021
	Test lab	IP ranges	No	10.0.0.0/8	Not used	1 Jan 2024
	United Kingdom	Countries	No	GB	Not used	1 Mar 2025

From the tenant's cross-tenant access settings and Conditional Access named locations. Trusting another organisation's MFA is safest for named partners only, not as the default.
